## IN THE CLAIMS

Please amend the claims as follows:

1. (currently amended) A method for processing macros of varying grammatical invocation by a pre-processor <u>having a lexer</u>, a glue routine, a macro invocation parser and a parser, said method comprising:

receiving an identifier token from source code;

in response to said received identifier token matching a macro identifier stored in a symbol table:

replacing said identifier token with a <u>corresponding</u> macro form token eorresponding to said identifier token from said symbol table;

sending said macro form token to said glue routine;

invoking said macro invocation parser by said glue routine;

continuously receiving transferring tokens to by said macro invocation parser via said glue routine until a completion of said macro invocation; and

sending a macro body definition of said macro to said lexer by said macro invocation parser.

- 2. (original) The method of Claim 1, wherein said receiving step is performed by a lexer.
- 3. (original) The method of Claim 1, wherein said replacing step is performed by a lexer.

Amendment under 37 C.F.R. 5 1.116

RA000122.AM3

- 4. (original) The method of Claim 1, wherein said sending step is performed by a lexer.
- 5. (original) The method of Claim 1, wherein said transferring step further includes transferring tokens from a lexer to said macro invocation parser.
- 6. (currently amended) A computer program product residing on a computer usable medium for processing macros of varying grammatical invocation by a pre-processor <u>having a lexer</u>, a ghe routine, a macro invocation parser and a parser, said computer program product comprising:

program code means for receiving an identifier token from source code;

in response to said received identifier token matching a macro identifier stored in a symbol table:

program code means for replacing said identifier token with a corresponding macro form token corresponding to said identifier token from said symbol table;

program code means for sending said macro form token to said glue routine;

program code means for invoking said macro invocation parser by said glue routine;

program code means for <u>continuously receiving</u> transferring tokens to <u>by</u> said macro invocation parser via said glue routine until a completion of said macro invocation; and

program code means for sending a macro body definition of said macro to said lexer by said macro invocation parser.

Amendment under 37 C.F.R. § 1.116

- 7. (original) The computer program product of Claim 6, wherein said program code means for receiving is a lexer.
- 8. (original) The computer program product of Claim 6, wherein said program code means for replacing is a lexer.
- 9. (original) The computer program product of Claim 6, wherein said program code means for sending is a lexer.
- 10. (original) The computer program product of Claim 6, wherein said program code means for transferring further includes computer code means for transferring tokens from a lexer to said macro invocation parser.
